

Senior Product Manager with 7+ years designing AI-driven detection systems and automating high-friction operational workflows at Flipkart and Walmart, turning manual processes into self-running systems at scale.

WORK EXPERIENCE

Walmart Global Tech | Senior Product Manager, Seller Account Security

Sep 2025 – Jun 2026

- Sole IC PM owning Seller Account Security within Marketplace Trust & Safety, building a 0→1 platform to contain account takeovers for 100K+ global 3P sellers across 16 countries, coordinating ~10 engineers with no dedicated team.
- Redesigned enforcement from blunt full-account pauses into risk-tiered automation (human review for high-risk, self-recovery for low/medium), cutting reinstatement time from 3 days to under **1 hour** and recovering ~\$900K/year in seller GMV
 - Built a dual-layer detection system (rule-based + ML anomaly detection) across device, network, behavioral, and MFA-attempt signals, cutting false-positive investigations by ~30%
 - Automated enforcement actions scoped to the compromised user instead of the full seller account, cutting time-to-containment by ~12 days and avoiding an estimated ~\$500K/year in fraud losses

Flipkart Internet | Product Manager II, Customer Shopping Experience

Jan 2025 – Aug 2025

- Led the User Journey and Address functional platform service, powering the shopping & delivery experience on Flipkart
- Built **Address Auto-Switch**, which automatically detects delivery intent for Flipkart Minutes via location and behavioral signals instead of defaulting to a static saved address, cutting Minutes RTOs by ~20bps
 - Improved Flipkart Minutes discovery from **65% to 94%** by enhancing location precision for serviceability
 - Reduced RTOs (return-to-origin failures) due to misroutes from **4% to 2.5%** through one-click address correction at order placement

Flipkart Internet | Product Manager II, Flipkart Grocery

Jul 2022 – Dec 2024

- Led the Customer Value Proposition charter, driving portfolio design, product availability, and pricing automation to enhance growth
- Portfolio Design: Drove ~2% regional category GMV growth**
- Built **Portfolio Recommendation**, an AI-driven SKU-matching engine standardizing ~80% of product titles across 4 competitor crawls at ~93% accuracy, then ranking to surface missing regional SKUs at pincode granularity
 - Built **Selection Health**, a product-performance dashboard tiering SKUs by sales and visibility, balancing category-manager boost/churn decisions against shopper-facing quality, improving portfolio sharpness (% of portfolio contributing to 90% of revenue) from **38% to 47%**
 - Reduced liquidation loss by ~30bps via **Product Churn**, a churn recommendation model flagging at-risk products from selling, buying, and inventory-health signals

Product Availability: Improved in-stock by ~4%

- Connected Flipkart's procurement, demand-forecasting, and purchase-order systems into one unified workflow by onboarding Grocery onto **Master Management** (Flipkart's procurement planning system), cutting portfolio review cycles from monthly to weekly and procurement cycle time by ~2 days
- Improved same-day PO (purchase order) conversion by ~10% by automating purchase-readiness checks and contract-expiry alerts
- Automated sales-based inventory allocation, closing the in-stock gap between warehouse and app-visible inventory from **6% to 2%**
- Cut non-master inventory (churned SKUs stuck in the warehouse) from **5% to under 1%** via multi-level portfolio limits

Product Pricing: Delivered a ~20bps margin improvement

- Automated Flipkart Grocery's manual pricing-change process end-to-end, eliminating ~120 man-hours/month of manual effort and cutting turnaround time by ~3 hours
- Built a threshold-based competitive price-match pipeline that autonomously reacts to competitor price changes without manual intervention, cutting reaction time from ~4 hours to ~15 minutes
- Implemented an automated pricing rule based on days-on-hand inventory logic, avoiding stockouts by ~30bps

Flipkart Internet | Manager, Category Marketing, Flipkart Grocery

Jul 2018 – Jun 2021

- Worked closely with senior leadership in Business (SVP), Product (VP), and Supply Chain in building the grocery business from day one
- Built a modular, cohort-based demand planning model across **60+ Tier 1 & 2 cities**, enabling rapid scenario replanning during COVID demand shifts (Instant Karma Award)
 - Drove ~30% customer acquisition growth and a ₹140 (~10%) increase in average order value through segmented discounting and a Tiered Incentive Offer, while cutting CAC by ₹60 (~20%) and improving Contribution Margin by 50bps (Instant Karma Award, Innovation Award)

PROJECTS

- Built and shipped three personal projects using AI-assisted development: Cricket Draft, [Bingo](#), and [The Game Lobby](#).
- Cricket Draft and The Game Lobby: both built end-to-end using Claude Code, hosted on Vercel with a Neon database, and Alby powering the online multiplayer experience

EDUCATION

Indian School of Business (ISB) | PGP in Management, Marketing & Operations | CGPA 3.7/4 | Dean's List, top 10%

Jun 2021 – May 2022

BITS Pilani, Hyderabad | B.E. (Hons.), Mechanical Engineering | CGPA 8.53/10

Aug 2014 – May 2018

SKILLS

- AI-Assisted Building & Automation:** Hands-on end-to-end product building with AI coding tools (Claude Code, Google AI Studio); rapid prototyping mindset; identifying and systemizing repetitive operational workflows (pricing, procurement, catalog operations); risk-tiered automation design (human-in-the-loop vs. full autonomy)
- AI/ML, Technical & Cross-Functional:** ML-backed PRDs & success metrics (catalog/entity matching, fraud & anomaly detection); precision/recall and false-positive/false-negative trade-off reasoning; API & data pipeline literacy; driving alignment and tool adoption across Engineering, Data Science, Design, Operations, and Risk without direct authority
